## PROJECTS

### **YOLO Based Adaptive Traffic Control Signal Control System and Real Time Violation Monitoring (Major)**

- Built an intelligent urban traffic management system by integrating adaptive traffic signal control, signal violation detection and emergency vehicle prioritization with GUI dashboard using YOLOv11, OpenCV, Python, ByteTrack, Streamlit and PyTorch.
- The system results in an 18% increase in traffic flow, 22% reduction in vehicle wait time near signal intersection in real-time scenarios.
- The work was published in IEEE Digital Library, 6TH International Conference on IoT Based Control Networks and Intelligent Systems , (*ICICNIS 2025*).

### **Government Schemes Eligibility Notification System (Minor)**

- Developed an intelligent notification system that sends government schemes updates to eligible registered users based on eligibility criteria in 7 Indian preferred languages through mail.
- Implemented automated eligibility matching using database filtering and rule-based logic.
- Built using Python, MySQL, REST API, HTML/CSS/JS, SMS/Email API.
